State-of-the-Art  
Post-Production  
Facility in  
Central Europe.***

For nearly 50 years, FotoKem Film and Video has, from its flagship campus in Burbank, Calif., provided filmmakers with the industry's most innovative technology and post-production services.

That tradition has now extended into Central and Eastern Europe, with the recent opening of FotoKem Budapest – a state-of-the-art post-production facility situated within the new 52-acre Raleigh Studios complex. FotoKem Budapest offers clients 16mm and 35mm negative processing on the studio lot. The film laboratory was manufactured and assembled by RTI's expert staff.

Treise and Calder processors along with a BHP printer form the backbone for the lab's commitment to its clients. Productions located on the studio lot have access to screen their film dailies in the spacious 48 seat theater.

"The service that RTI has provided us with their film products continues to help us meet the client's needs and expectations for quality," says Allan Tudzin, Managing Director for FotoKem Budapest.

FotoKem's highly qualified staff of post-production professionals will also be on hand 24 hours a day to support and manage video, data and film production needs. This along with the support of RTI and local talent makes the Central European region one of the top production destinations in the world.
